Electronic starters

These starters operate based on the consumed current and depending on the setting of protective parameter cut off power immediately when the current is increased. It can provide up to 90% protection in single-phase motors, 80% in three-phase motors (if open phase control is used) and 50% (if open phase control is not used).These starters are unable to be connected to other external controllers.

External Over load Protection

Motor Stalled Protection

Dry running Protection

Under / Over Voltage Protection

Memory Function when Power off & Recovery
